

Configuring the XML Libraries

by Don Brown

A guide to stxx

Table of contents

1 Overview.....	2
2 Java 1.4+.....	2
3 Java 1.3.1 or earlier.....	2

1. Overview

Stxx requires a later version of a JAXP 1.2-compatible XML library and if Xalan/Xerces are used, a later version of both libraries are strongly recommended. The use of the XML libraries varies depending on what version of Java is being used.

2. Java 1.4+

Since Sun's Java 1.4 comes with an older version of Xalan, the XML libraries in the directory `libs/core/endorsed` need to be copied to `$JAVA_HOME/lib/endorsed`. For more information, see the [Xalan FAQ](#).

3. Java 1.3.1 or earlier

Since older versions of Java don't contain any XML libraries, simply copying the jars in `libs/core/endorsed` to `/WEB-INF/lib` of your web application will suffice.
